Instructions & Study Method

Welcome to your Applaa offline practice booklet. Please follow these guidelines to maximize your learning outcome:

- 1. Distraction-Free Practice:** Solve the multiple-choice questions in Section 1 under timed conditions. Do not look for shortcuts or answers until you are completely done.
- 2. Check & Submit Online:** We have intentionally excluded the answer key from this printout. To get your score, see worked solutions, and track your progress metrics, open: <https://applaa.com/practice/check?exam=lnat&paper;=190> on any browser. Bubble in your answers in our digital check sheet.
- 3. Learn with Appy Buddy (AI Socratic Tutor):** Applaa is a 100% ad-free educational space. Our online AI Tutor guides you step-by-step through questions you get wrong, showing you how to solve them rather than just giving you the answer.

■ SUPERCHARGE YOUR STUDIES WITH APPLAA DESKTOP APP

Tired of printing PDFs and manual grading? Download the **Applaa Desktop Application**. It includes interactive exam mocks, real-time pacing stats, auto-grading, and personalized Socratic AI support. Get a **14-day free trial** of our premium preparation package to track your progress rate.

Section 1: Practice Questions

Reading Passage:

The ongoing debate surrounding imposing strict state regulations on decentralized cryptocurrencies has emerged as a central theme in modern Economics and Law. Proponents argue that its adoption represents a significant milestone, promising protecting consumers from market volatility and preventing money laundering and illicit financing. By streamlining operations and introducing systemic standardization, it could pave the way for long-overdue reforms.

On the other hand, a substantial body of criticism focuses on the risk of stifling technological innovation and undermining the individual sovereignty of decentralized networks. Skeptics point out that the implementation of such systems often leads to unintended consequences. They caution that the desire for progress must not overshadow the ethical hazards inherent in this transition.

To address these conflicts, legal and social scholars have suggested a variety of regulatory remedies, most notably requiring cryptocurrency exchanges to enforce standard identity verification while leaving protocol layers unregulated. While this compromise holds promise, it faces challenges from both sides. Proponents fear it will dilute the effectiveness of the system, whereas critics worry it will fail to provide sufficient protections, leaving the core issues unresolved.

Question 1 — [Section A / Reading Comprehension]

According to the passage, which of the following best represents the primary benefit claimed by the proponents of imposing strict state regulations on decentralized cryptocurrencies?

- A: It has been universally endorsed by all legal and ethical scholars in Economics and Law.
- B: It would completely eliminate the need for any government oversight in Economics and Law.
- C: without regulatory oversight, retail investors are vulnerable to systemic fraud and market manipulation
- D: It will guarantee immediate financial profits for all stakeholders involved.

Question 2 — [Section A / Reading Comprehension]

Which of the following assumptions is necessary for the proponents' argument regarding imposing strict state regulations on decentralized cryptocurrencies to stand?

- A: That the financial cost of implementing the technology is completely negligible.
- B: That traditional methods have never successfully solved any of the problems in this area.
- C: national governments possess the technical enforcement capability to regulate peer-to-peer digital networks
- D: That public opinion is always unified on matters of Economics and Law.

Question 3 — [Section A / Reading Comprehension]

Based on the second paragraph, what inference can be drawn regarding the critics' view on the risks of imposing strict state regulations on decentralized cryptocurrencies?

- A: Cryptocurrencies represent an ideological challenge to the state's monopoly on monetary issuance.
- B: Paper fiat currency is completely immune to inflation and currency manipulation.
- C: All transactions on public blockchains are completely invisible and untraceable.
- D: Most cryptocurrency users are using digital assets to buy physical real estate.

Reading Passage:

The ongoing debate surrounding compulsory voting in national elections has emerged as a central theme in modern Political Philosophy. Proponents argue that its adoption represents a significant milestone, promising enhanced democratic legitimacy and broader representation of marginalized groups. By streamlining operations and introducing systemic standardization, it could pave the way for long-overdue reforms.

However, this enthusiasm is tempered by warnings from critics who raise concerns regarding infringing upon individual liberty and forcing politically disengaged citizens to make arbitrary choices. In their view, the unchecked expansion of this practice presents a threat to fundamental societal values. The primary danger, they suggest, lies in the potential to overlook individual nuances in favor of systemic efficiency.

To address these conflicts, legal and social scholars have suggested a variety of regulatory remedies, most notably mandating turnout at the polls while including a prominent 'None of the Above' option on the ballot. While this compromise holds promise, it faces challenges from both sides. Proponents fear it will dilute the effectiveness of the system, whereas critics worry it will fail to provide sufficient protections, leaving the core issues unresolved.

Question 4 — [Section A / Reading Comprehension]

According to the passage, which of the following best represents the primary benefit claimed by the proponents of compulsory voting in national elections?

- A: It would completely eliminate the need for any government oversight in Political Philosophy.
- B: It has been universally endorsed by all legal and ethical scholars in Political Philosophy.
- C: voting is a civic obligation comparable to tax paying or jury service, which benefits the collective
- D: It will guarantee immediate financial profits for all stakeholders involved.

Question 5 — [Section A / Reading Comprehension]

Which of the following assumptions is necessary for the proponents' argument regarding compulsory voting in national elections to stand?

- A: That traditional methods have never successfully solved any of the problems in this area.
- B: higher voter turnout directly correlates with a more responsive and accountable government
- C: That public opinion is always unified on matters of Political Philosophy.
- D: That the financial cost of implementing the technology is completely negligible.

Question 6 — [Section A / Reading Comprehension]

Based on the second paragraph, what inference can be drawn regarding the critics' view on the risks of compulsory voting in national elections?

- A: Compulsory voting always results in the election of radical political candidates.
- B: Most democratic countries have already banned voluntary voting systems.
- C: Uninformed voters are statistically more likely to vote for conservative policies.
- D: Forced participation may compromise the qualitative value of the democratic mandate.

Reading Passage:

The ongoing debate surrounding AI-driven judicial sentencing algorithms has emerged as a central theme in modern Technology and Law. Proponents argue that its adoption represents a significant milestone, promising the elimination of human bias and greater consistency in judicial sentencing. By streamlining operations and introducing systemic standardization, it could pave the way for long-overdue reforms.

On the other hand, a substantial body of criticism focuses on the risk of perpetuating historical prejudices embedded in the training data and violating procedural transparency. Skeptics point out that the implementation of such systems often leads to unintended consequences. They caution that the desire for progress must not overshadow the ethical hazards inherent in this transition.

An intermediate solution often proposed is implementing audit protocols that force algorithms to explain their decision-making logic. In theory, this approach aims to strike a balance between efficiency and protection. However, in practice, implementing such regulations is fraught with difficulty, as it requires balancing contradictory objectives that may be fundamentally irreconcilable.

Question 7 — [Section A / Reading Comprehension]

According to the passage, which of the following best represents the primary benefit claimed by the proponents of AI-driven judicial sentencing algorithms?

- A: It will guarantee immediate financial profits for all stakeholders involved.
- B: It has been universally endorsed by all legal and ethical scholars in Technology and Law.
- C: automated decision systems can process massive volumes of case law faster and more consistently than human judges
- D: It would completely eliminate the need for any government oversight in Technology and Law.

Question 8 — [Section A / Reading Comprehension]

Which of the following assumptions is necessary for the proponents' argument regarding AI-driven judicial sentencing algorithms to stand?

- A: That the financial cost of implementing the technology is completely negligible.
- B: That traditional methods have never successfully solved any of the problems in this area.
- C: historical sentencing databases contain patterns that are appropriate to replicate in future rulings
- D: That public opinion is always unified on matters of Technology and Law.

Question 9 — [Section A / Reading Comprehension]

Based on the second paragraph, what inference can be drawn regarding the critics' view on the risks of AI-driven judicial sentencing algorithms?

- A:** AI systems are physically incapable of processing complex legal briefs.
- B:** Historical sentencing data contains no patterns of racial or economic disparity.
- C:** Judges will be completely replaced by robots within the next five years.
- D:** Algorithms risk encoding past discriminatory practices under the guise of statistical objectivity.

Submit Answers & Check worked Solutions
