Instructions & Study Method

Welcome to your Applaa offline practice booklet. Please follow these guidelines to maximize your learning outcome:

- 1. Distraction-Free Practice:** Solve the multiple-choice questions in Section 1 under timed conditions. Do not look for shortcuts or answers until you are completely done.
- 2. Check & Submit Online:** We have intentionally excluded the answer key from this printout. To get your score, see worked solutions, and track your progress metrics, open: <https://applaa.com/practice/check?exam=lnat&paper;=84> on any browser. Bubble in your answers in our digital check sheet.
- 3. Learn with Appy Buddy (AI Socratic Tutor):** Applaa is a 100% ad-free educational space. Our online AI Tutor guides you step-by-step through questions you get wrong, showing you how to solve them rather than just giving you the answer.

■ SUPERCHARGE YOUR STUDIES WITH APPLAA DESKTOP APP

Tired of printing PDFs and manual grading? Download the **Applaa Desktop Application**. It includes interactive exam mocks, real-time pacing stats, auto-grading, and personalized Socratic AI support. Get a **14-day free trial** of our premium preparation package to track your progress rate.

Section 1: Practice Questions

Reading Passage:

The ongoing debate surrounding AI-driven judicial sentencing algorithms has emerged as a central theme in modern Technology and Law. Proponents argue that its adoption represents a significant milestone, promising the elimination of human bias and greater consistency in judicial sentencing. By streamlining operations and introducing systemic standardization, it could pave the way for long-overdue reforms.

On the other hand, a substantial body of criticism focuses on the risk of perpetuating historical prejudices embedded in the training data and violating procedural transparency. Skeptics point out that the implementation of such systems often leads to unintended consequences. They caution that the desire for progress must not overshadow the ethical hazards inherent in this transition.

An intermediate solution often proposed is implementing audit protocols that force algorithms to explain their decision-making logic. In theory, this approach aims to strike a balance between efficiency and protection. However, in practice, implementing such regulations is fraught with difficulty, as it requires balancing contradictory objectives that may be fundamentally irreconcilable.

Question 1 — [Section A / Reading Comprehension]

According to the passage, which of the following best represents the primary benefit claimed by the proponents of AI-driven judicial sentencing algorithms?

- A:** automated decision systems can process massive volumes of case law faster and more consistently than human judges
- B:** It has been universally endorsed by all legal and ethical scholars in Technology and Law.
- C:** It would completely eliminate the need for any government oversight in Technology and Law.
- D:** It will guarantee immediate financial profits for all stakeholders involved.

Question 2 — [Section A / Reading Comprehension]

Which of the following assumptions is necessary for the proponents' argument regarding AI-driven judicial sentencing algorithms to stand?

- A:** That public opinion is always unified on matters of Technology and Law.
- B:** That traditional methods have never successfully solved any of the problems in this area.
- C:** That the financial cost of implementing the technology is completely negligible.
- D:** historical sentencing databases contain patterns that are appropriate to replicate in future rulings

Question 3 — [Section A / Reading Comprehension]

Based on the second paragraph, what inference can be drawn regarding the critics' view on the risks of AI-driven judicial sentencing algorithms?

- A: Judges will be completely replaced by robots within the next five years.
- B: Algorithms risk encoding past discriminatory practices under the guise of statistical objectivity.
- C: Historical sentencing data contains no patterns of racial or economic disparity.
- D: AI systems are physically incapable of processing complex legal briefs.

Reading Passage:

The ongoing debate surrounding deploying live facial recognition in public street cameras has emerged as a central theme in modern Civil Liberties. Proponents argue that its adoption represents a significant milestone, promising the rapid identification of wanted criminals and preventing public security threats. By streamlining operations and introducing systemic standardization, it could pave the way for long-overdue reforms.

On the other hand, a substantial body of criticism focuses on the risk of eroding the right to privacy, chilling public assembly, and creating a state of perpetual surveillance. Skeptics point out that the implementation of such systems often leads to unintended consequences. They caution that the desire for progress must not overshadow the ethical hazards inherent in this transition.

An intermediate solution often proposed is requiring judicial warrants before cross-referencing surveillance feeds against database watchlists. In theory, this approach aims to strike a balance between efficiency and protection. However, in practice, implementing such regulations is fraught with difficulty, as it requires balancing contradictory objectives that may be fundamentally irreconcilable.

Question 4 — [Section A / Reading Comprehension]

According to the passage, which of the following best represents the primary benefit claimed by the proponents of deploying live facial recognition in public street cameras?

- A: Law-abiding citizens have no reason to fear public surveillance if it significantly reduces violent crime rates.
- B: It has been universally endorsed by all legal and ethical scholars in Civil Liberties.
- C: It will guarantee immediate financial profits for all stakeholders involved.
- D: It would completely eliminate the need for any government oversight in Civil Liberties.

Question 5 — [Section A / Reading Comprehension]

Which of the following assumptions is necessary for the proponents' argument regarding deploying live facial recognition in public street cameras to stand?

- A: That public opinion is always unified on matters of Civil Liberties.
- B: That traditional methods have never successfully solved any of the problems in this area.
- C: That the financial cost of implementing the technology is completely negligible.
- D: Surveillance systems are highly accurate and free from false-positive demographic biases.

Question 6 — [Section A / Reading Comprehension]

Based on the second paragraph, what inference can be drawn regarding the critics' view on the risks of deploying live facial recognition in public street cameras?

- A: Facial recognition is only capable of identifying people wearing masks.
- B: Camera footage is automatically deleted after 24 hours in all jurisdictions.
- C: Private security guards have the same legal arrest powers as police officers.
- D: Mass surveillance represents a fundamental shift in the presumption of innocence in public spaces.

Reading Passage:

Few issues in contemporary Bioethics elicit as much controversy as the prospect of permitting the commercial sale of CRISPR germline editing. At the core of the supportive position lies the promise of eradicating severe hereditary genetic diseases and reducing long-term public health costs. Advocates argue that failing to embrace this development constitutes a form of societal stagnation, keeping obsolete frameworks in place.

On the other hand, a substantial body of criticism focuses on the risk of creating a permanent genetic class divide where wealthy parents purchase cognitive and physical enhancements. Skeptics point out that the implementation of such systems often leads to unintended consequences. They caution that the desire for progress must not overshadow the ethical hazards inherent in this transition.

To address these conflicts, legal and social scholars have suggested a variety of regulatory remedies, most notably creating strict regulatory frameworks that restrict modifications purely to therapeutic cures. While this compromise holds promise, it faces challenges from both sides. Proponents fear it will dilute the effectiveness of the system, whereas critics worry it will fail to provide sufficient protections, leaving the core issues unresolved.

Question 7 — [Section A / Reading Comprehension]

According to the passage, which of the following best represents the primary benefit claimed by the proponents of permitting the commercial sale of CRISPR germline editing?

- A: it is a moral imperative to use biotechnology to spare future children from known genetic illnesses
- B: It would completely eliminate the need for any government oversight in Bioethics.
- C: It will guarantee immediate financial profits for all stakeholders involved.
- D: It has been universally endorsed by all legal and ethical scholars in Bioethics.

Question 8 — [Section A / Reading Comprehension]

Which of the following assumptions is necessary for the proponents' argument regarding permitting the commercial sale of CRISPR germline editing to stand?

- A: That the financial cost of implementing the technology is completely negligible.
- B: That public opinion is always unified on matters of Bioethics.
- C: it is possible to maintain a clear and enforceable distinction between medical therapy and cosmetic enhancement
- D: That traditional methods have never successfully solved any of the problems in this area.

Question 9 — [Section A / Reading Comprehension]

Based on the second paragraph, what inference can be drawn regarding the critics' view on the risks of permitting the commercial sale of CRISPR germline editing?

- A:** Unregulated genetic modification risks translating economic inequality into biological determinism.
- B:** Most genetic diseases are controlled by a single, easily isolated gene.
- C:** CRISPR-Cas9 is a highly theoretical tool that has never been tested in a laboratory.
- D:** Hereditary diseases play a vital role in maintaining the ecological balance of human populations.
