Section 1: Practice Questions

Question 1 — [Verbal Reasoning / true_false_cant_tell]

Read the passage below and decide if the following statement is True, False, or Can't Tell based on the text.

Passage: In 2023, research conducted by researchers led by Prof. Alan Turing at the Genetic Engineering Center investigated the properties of Carbon-Nanotubes. Initial experimental setups achieved an energy conversion efficiency of 27 percent. By refining the chemical vapor deposition process and reducing crystalline defects, the team successfully boosted the efficiency of Carbon-Nanotubes to 49 percent in follow-up trials. Despite these promising results, commercial viability is currently limited by the high cost of raw precursor materials and safety regulations governing nanotechnology manufacturing. Statement: The research team led by Prof. Alan Turing managed to increase the energy conversion efficiency of Carbon-Nanotubes.

- A: True
- B: False
- C: Can't Tell

Question 2 — [Verbal Reasoning / true_false_cant_tell]

Read the passage below and decide if the following statement is True, False, or Can't Tell based on the text.

In 1942, the annual production of coal in Pakistan stood at approximately 23 million metric tons. Following key infrastructure improvements and trade agreements with Norway, production in Pakistan surged to 82 million metric tons by 1974. During this same period, Greece emerged as the primary global importer of coal, consuming over sixty percent of the total global export supply, although its domestic production remained minimal. Following a nationwide distribution of protective nets and sanitation improvements, the rate fell to 130 cases per 100,000 people over the next decade. While this decline was celebrated as a major victory, health officials warned that rising temperatures could allow vector populations to rebound in rural regions. Statement: The incidence rate of Tuberculosis per 100,000 people in Canada decreased after the public health campaign.

Following key infrastructure improvements and trade agreements with Singapore, production in Hungary surged to 93 million metric tons by 1877. During this same period, Switzerland emerged as the primary global importer of copper, consuming over sixty percent of the total global export supply, although its domestic production remained minimal. Statement: The annual production of copper in Hungary was higher in 1877 than it was in 1864.
